Assignments Module – 5 (Selenium IDE)

1) What is Automation Testing?

Automation Testing is the process of using software tools to execute pre-scripted tests on an application automatically, without manual intervention.
And test automation is the best way to increase the effectiveness, test coverage, and execution speed in software testing.
Example, Think of it like imagine we have to test a login page 500 times with different credentials. Manually, it would take hours. With automation, we can write the test once, and the tool runs it 500 times perfectly, every time. Tools like Selenium, cypress etc.

2) Which Are The Browsers Supported By Selenium Ide?

Google Chrome, Mozilla firefox, Microsoft Edge

3) What are the benefits of Automation Testing?

70% faster than manual testing

Ensure consistency saves time and cost

Improves accuracy and no human error

More cycle of execution can be achieved through automation Early time to market

Better speed in executing tests Re-usable test scripts

4) What are the advantages of Selenium?

Very easy to use and install, zero licensing cost free and open source

Browser support selenium ide works in all major browsers

Provide support for extensions

Selenium ide is platform independent like windows,linux,mac os etc.

5) Why testersshould opt for Selenium and not QTP?

Selenium is open source free to use and QTP(HP Quick Test Pro) is paid licance

Selenium ide support all major browsers and QTP support limited browsers only

Selenium is available for windows,mac os,linux and QTP is primarily available for windows

6) To validate the tops technologies website Contact us page and enter your friend detail at last “Login and sidemenu”
